ICIDS III System Administrator Course

Purpose:
The ICIDS III System Administrator Training course is designed to provide students with the skills required to successfully operate and manage a functional ICIDS III either in place or being installed at various Government installations and/or facilities.

Description:
Through lectures, case studies, practical exercises and related hands-on experiences students acquire the skills necessary for proper operations and management of the ICIDS III, including how to configure and modify their system into a functional state that complies with installation needs. Students shall be exposed to and learn to operate the ICIDS III, including a variety of intrusion detections systems, entry control equipment, CCTV, and how the ICIDS III operates in conjunction with these. Recipients successfully completing this training will receive an official certificate of completion. Successful completion of the course entails attending 80% of classes (only excused absences, i.e., illness, are authorized) and obtaining a minimum score of 70% on a written exam and practical exam.

Course Length: 36 hours

Recommended Target Audience: The attendee should have a minimum of one-year prior experience working in security, computers and/or electronics.
